## Fire Starting Kit™ – Spec Sheet

### **Description:**

- Includes Faststrike™ and (4) Fastfire™ tinders

***Faststrike:***

- A simple and durable design that minimizes both weight & bulk, yet maximizes capability. The carbon steel hacksaw blade is an effective striker with additional functions for cutting & fabricating dense manmade materials (metals, plastics) beyond the capability of knives and multi-tools.

***Fastfire:***

- Generates a sustained, 1300°F flame in just seconds
- Burns even when WET!
- Wind resistant
- Smokeless and odorless
- Ignites easily from a spark or any flame
- Very low flashpoint (140°F)
- Lights under conditions where other tinders would fail
- Each tinder is packaged using a rugged, high quality foil that guarantees long shelf-life and durability.
- Solid cubes don't leak, spill or foul up your other gear
- Left whole, one cube will burn vigorously for 10 - 12 minutes
- If divided into eighths, eight separate fires may be generated, with each tinder piece burning 2 - 3 minutes each
- Once extinguished, Fastfire material cools to the touch within seconds

***Specifications:***

- Faststrike: 3" ferrocium rod attached to a 3" hacksaw blade. Weighs only 1oz!
- Each Fastfire tinder weighs 0.2oz each. Approximately 1" x 1" x 1"
- Our pillow-paks are eco-friendly, consisting of 100% recycled materials
